The Simons Foundation Autism Research Initiative is now accepting applications that address foundational knowledge about the neurobehavioral differences associated with autism spectrum disorders (ASD), which will directly inform the development or refinement of tools needed for translational efforts, such as biomarkers and outcome measures.

Special emphasis is placed on objective, quantitative measures that may be used in conjunction with standardized clinical measures and genomic information to better triangulate phenotypic and neurobiological variability within and across individuals with ASD.

**Budget**

Project budget must be for $750,000 or less, inclusive of 20 percent indirect costs, over a period of up to three (3) years.

**Application Process:** Applicants must submit their full application via proposalCENTRAL.

**Internal Deadline:** April 29, 2021

**Sponsor Deadline:** May 3, 2021
